Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Dear Sir:

In response to the telephonic interview with Examiner Thukhanh T. Nguyen on July 16, 2004, Applicants are submitting a statement of the substance of the interview pursuant to MPEP § 713.04.

REMARKS

Applicants would like to thank Examiner Nguyen for the helpful discussion with Applicants' representative on July 16, 2004 concerning the requirement for a substitute declaration as set forth in the Notice of Allowability, mailed 4/21/04 (see attached). In the interview, Applicants sought clarification regarding the requirement for a substitute declaration. Applicant's representative noted that no reason was provided as to why the declaration was deficient. Specifically, the Notice of Allowability did not provide a reason in the form of an EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152). Applicants' representative further noted that the previous Notice of Allowance, mailed 12/11/03 (which was later withdrawn to allow entry of an amendment; see attached), did not list a requirement for a new substitute declaration.

In response to Applicants' request for clarification, Examiner Nguyen informed Applicant's representative that the requirement was a mistake and that Applicants were not required to file a substitute declaration. Applicant's submit herewith a copy of the original declaration filed with this case.

With the submission of the issue fee herewith, Applicants believe they have fully complied with all of the requirements for issuance.

DETAILED ACTION

Allowable Subject Matter

1. Claims 2-3, 5-6, 8-9, 10-15, 19-25, 27 and 28-42 are allowed. The claims are renumbered as flowing: claims 19-20 are now claims 1-2; claims 2-3 are now claims 3-4; claims 11-15 are now claims 10-14; claims 19-20 are now claims 1-2; claim 21 is now claim 7; claims 22-25 and 27-42 are now claims 15-34 respectively.

2. The following is an examiner's statement of reasons for allowance:

The Japanese reference (9059 – 133) teaches an apparatus and method for forming a sheet of dough comprising a screw pump (4) connected to an inlet (3) to pump material under pressure, a discharge manifold (1) having a hollow interior chamber formed at one side by the pump, a top (1), a bottom (12), two end faces (Fig. 2), and a roller (7) on the other side, a casting line (12 and 14) position downstream of the discharge manifold including an endless casting belt (14) for transporting and forming a continuous sheet of material. The apparatus further comprises drive mechanisms (the roller on top of the compartment 15, 10, and 5) to drive the conveyor belt (14), the roller (7) and the screw pump (4).

However, the Japanese reference fails to disclose a pump displaced upstream to the manifold, and a plurality of inlets opening into the discharge manifold for receiving the material from the pump. Further, the screw pump inside the hopper as disclosed by the Japanese reference would not be able to transport viscous material such as cheese, because the material would stuck together, and the screw would tear the material into many small pieces instead of conveying the material to the outlet.
